

**Amendments to the Claims:**

The listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Canceled)
2. (Currently Amended) A network apparatus comprising:  
a main device operable to be linked to a network; ~~represented by the Internet,~~ and  
a portable remote controller device ~~for~~ operable to remotely ~~controlling~~ control ~~said the~~ main device by ~~means way~~ of communication, ~~wherein~~ wherein ~~said the~~ remote controller device includes:  
    ~~access destination specifying means for specifying an access destination to said main device;~~  
    a first display means for displaying operable to display information sent from the ~~said~~ main device;  
    an identification code storage ~~means for~~ storing an identification code of the remote controller; and ~~identifying itself;~~

~~said access destination specifying means serving as means for~~  
~~sending an identification code sending section operable to send the said~~  
~~identification code to the main device; and~~

wherein said the main device includes:

an access destination storage storing the identification code of the  
remote controller and an access destination in the network in a one-to-one  
correspondence;

an access section operable to access ~~means for accessing~~ the access  
destination corresponding to the identification code specified by said sent from  
the remote controller device and obtaining obtain the information from the  
access destination therefrom;

an information sending section operable to send ~~means for sending~~  
the obtained information ~~obtained by said access means to said the~~ remote  
controller device; and

a second display operable to display the obtained information;

~~access destination storage means for storing the identification code~~  
~~of said remote controller device and the access destination in a one-to-one~~  
~~correspondence;~~

~~said access means serving as means for accessing the access~~  
~~destination corresponding to the identification code received from said remote~~  
~~controller device.~~

wherein the remote controller device is operable to send a display switching signal to the main device; and

wherein the main device determines whether the second display displays the obtained information based on the display switching signal sent from the remote controller device.

3. (Currently Amended) ~~The network apparatus according to Claim 2,~~  
~~wherein~~ A network apparatus comprising:

a main device linked to a network represented by the Internet, and  
a portable remote controller device for remotely controlling said main  
device by means of communication, wherein  
said remote controller device includes:

access destination specifying means for specifying an access  
destination to said main device;

display means for displaying information sent from said main  
device;

identification code storage means for storing an identification code  
identifying itself;

said access destination specifying means serving as means for  
sending said identification code; and

said main device includes:

access means for accessing the access destination specified by said remote controller device and obtaining information therefrom;

information sending means for sending the information obtained by said access means to said remote controller device; and

access destination storage means for storing the identification code of said remote controller device and the access destination in a one-to-one correspondence;

said access means serving as means for accessing the access destination corresponding to the identification code received from said remote controller device,

wherein said access destination storage means serves as means for storing a mail address as the access destination.

4. (Currently Amended) The network apparatus according to claim 6, wherein

~~said the first display means of said the~~ remote controller device includes ~~[[:]] a title displaying means section for displaying operable to display a~~ title of the information sent from ~~said the~~ main device.

5. (Currently Amended) The network apparatus according to claim  
~~Claim~~ 4, wherein

~~said~~ when the displayed title is specified, the first display means of  
~~said the~~ remote controller device ~~serves as means for, when the title displayed on~~  
~~said title display means is specified, displaying~~ displays a content of the  
information corresponding to the specified title ~~specified~~.

6. (Currently Amended) A network apparatus, comprising:  
a main device ~~linked~~ operable to be linked to a network; ~~represented~~  
~~by the internet, and~~

a portable remote controller device ~~for~~ operable to remotely  
~~controlling~~ control ~~said the~~ main device by ~~means~~ way of communication,  
wherein

wherein ~~said the~~ remote controller device includes:

an access destination specifying ~~means for~~ section operable to  
specify ~~specifying~~ an access destination in the network and send the specified  
access destination to ~~said the~~ main device; ~~and~~

a first display ~~means for displaying~~ operable to display  
information sent from ~~said the~~ main device; ~~and~~ , ~~and wherein~~

an identification code storage storing an identification code of  
the remote controller;

wherein the said main device includes:

an access means section operable to access for accessing the specified access destination specified by said remote controller device and obtaining obtain the information from the access destination therefrom; and

an information sending means section operable to send for sending the obtained information obtained by said access means to said the remote controller device; and

a second display operable to display the obtained information;

wherein:

wherein the said information sending section means of said the main device sends appends an identification code to the information and sends the information together with the appended identification code to said the remote controller device at an information sending destination after appending the identification code of said remote controller device to the information; and

wherein the said remote controller device further includes a display disabling means section that disables the first display to display the sent information for, when the information sent from said main device to said display means is not appended with its own identification code, disabling display of the information is not in conformity with the stored identification code.

7. (Currently Amended) The network apparatus according to claim 13, wherein

said the main device and said remote controller device communicate with each other ~~by means of~~ using infrared rays.

8. (Currently Amended) The network apparatus according to claim 2, wherein

said the first display means of said the remote controller device includes ~~[[:]] a title displaying~~ section means for displaying operable to display a title of the information sent from said the main device.

9. (Currently Amended) The network apparatus according to claim 3, wherein

said the first display means of said the remote controller device includes ~~[[:]] a title displaying~~ means for displaying section operable to display a title of the information sent from said the main device.

10. (Currently Amended) The network apparatus according to claim 8 [[2]], wherein when the displayed title is specified, the first said display means of said the remote controller device ~~serves as means for, when the title displayed on~~

~~said title display means is specified, displaying~~ displays a content of the information corresponding to the specified title ~~specified~~.

11. (Currently Amended) The network apparatus according to claim 9 [[3]], wherein when the displayed title is specified, the first said display means of said the remote controller device ~~serves as means for, when the title displayed on~~ said title display means is specified, displaying displays a content of the information corresponding to the specified title ~~specified~~.

12. (Currently Amended) The network apparatus according to claim 2, wherein:

~~said the~~ information sending means section of said the main device sends appends an identification code to the information and sends the information together with the appended identification code to said the remote controller device ~~at an information sending destination after appending the identification code of said remote controller device to the information; and~~

~~said the~~ remote controller device further includes a display disabling means for, section that disables the first display to display the sent information when the ~~information sent from said main device to said display means is not~~ appended with its own identification code is not in conformity with the stored identification code ~~, disabling display of the information.~~

13. (Currently Amended) The network apparatus according to claim 3, wherein:

~~said the~~ information sending ~~means~~ section of ~~said the~~ main device ~~sends~~ appends an identification code to the information and sends the information together with the appended identification code to ~~said the~~ remote controller device ~~at an information sending destination after appending the identification code of said remote controller device to the information; and~~

~~said the~~ remote controller device further includes a display disabling ~~means for,~~ section that disables the first display to display the sent information when the information sent from said main device to said display means is not appended with its own identification code is not in conformity with the stored identification code , ~~disabling display of the information.~~

14. (Canceled)

15. (Canceled)

16. (Currently Amended) The network apparatus according to claim 2, wherein

said the main device and said the remote controller device  
communicate with each other ~~by means of~~ using infrared rays.

17. (Currently Amended) The network apparatus according to claim 3,  
wherein

said the main device and said the remote controller device  
communicate with each other ~~by means of~~ using infrared rays.

18. (Currently Amended) The network apparatus according to claim 4,  
wherein

said the main device and said the remote controller device  
communicate with each other ~~by means of~~ using infrared rays.

19. (Currently Amended) The network apparatus according to claim 5,  
wherein

said the main device and said the remote controller device  
communicate with each other ~~by means of~~ using infrared rays.

20. (Currently Amended) The network apparatus according to claim 6,  
wherein

said the main device and said the remote controller device communicate with each other ~~by means of~~ using infrared rays.

21. (Canceled)

22. (Currently Amended) A method for accessing information over a network, comprising:

~~receiving, by a main device~~ sending a request for information from a portable remote controller device having a first display to a main device having a second display, a request for information;

~~obtaining, by the main device,~~ the requested information from the network;

~~determining whether an output to a display device coupled to the main device is allowed;~~

~~disabling the output to the display device when it is determined that the output is not allowed;~~

providing the ~~requested~~ obtained information from the main device to the portable remote controller device;

displaying the sent information on the first display of the remote controller device;

~~receiving, by the main device~~ sending a display switching signal  
from the portable remote controller device to the main device, a display  
switching signal; and

~~storing, by the main device, a setting for the portable remote~~  
~~controller device based on the display switching signal, wherein the~~  
~~determination of whether an output to the display device coupled to the main~~  
~~device is allowed is based on the stored setting.~~

determining whether the second display of the main device displays  
the obtained information based on the display switching signal sent from the  
remote controller device.

23. (Currently Amended) The method of claim 22, further  
comprising:

~~storing, by the main device, a setting for another portable remote~~  
~~controller device based on receipt of a display switching signal from the another~~  
~~portable remote controller device, wherein whether an output to the display~~  
~~device coupled to the main device is allowed for information requested by the~~  
~~another portable remote controller device is based on the stored setting for the~~  
~~another portable remote controller device.~~

sending another display switching signal from another remote  
controller device to the main device; and

determining whether the second display of the main device displays information requested from the another remote controller device based on the another display switching signal sent from the another remote controller device.

24. (Currently Amended) The method of claim 23, further comprising:

storing, ~~by the main device,~~ in the main device, an ~~ID~~ identification code, electronic mail address and password of each of the ~~portable~~ remote controller device and the another ~~portable~~ remote controller device in a one-to-one correspondence.

25. (Currently Amended) The network apparatus of claim 6, wherein the main device includes a storage ~~unit~~ that stores ~~an-ID~~ the identification code, electronic mail address and password of the remote controller device in a one-to-one correspondence.

26. (New) The network apparatus according to claim 2, wherein the access destination storage stores a mail address as the access destination.
